

“Metal management & reducing transactional costs can achieve significant savings”

METAL MANAGEMENT

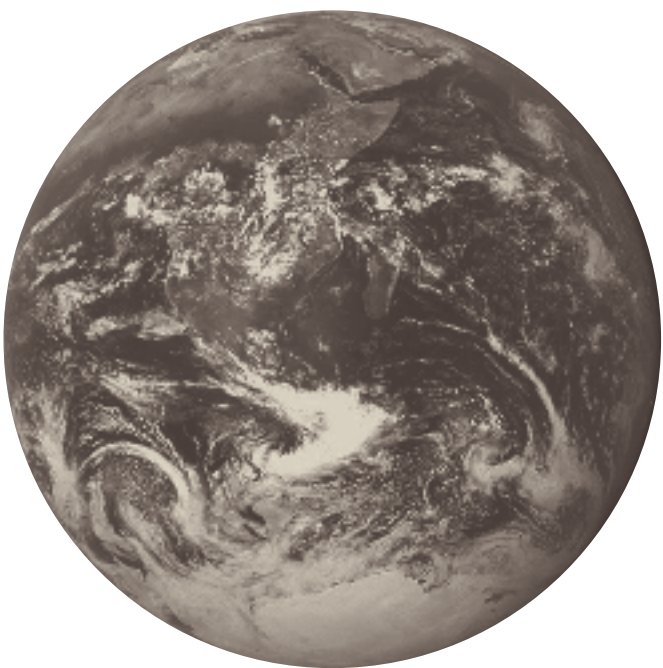

SEMPSA JP are able to offer many different metal management opportunities to minimise the impact that fluctuating gold, silver and platinum prices are having on the industry.

The ability to combine order funding with potential refining business out-turn. This can reduce transactional cost and give significant time savings by using a metal account combined with the refining service.

The Triangulation of:

- REFINING
- METAL ACCOUNT
- PURCHASE ORDER

can provide significant benefits to your business in terms of costs and supply chain management.

Specialist suppliers
of precious metal blanks
to major mints worldwide

“We continue to make significant investments into dedicated refining lines to recycle stocks of gold and silver”

SUPERIOR QUALITY & SERVICE FROM ONE OF THE WORLD'S LEADING MATERIALS SCIENCE COMPANIES

SEMPSA JP is a leading supplier of fabricated precious metals in the US and Europe. Our blanks for coins and medals are supplied to major Mints all over the world.

We are a major supplier of gold, silver, platinum and palladium alloys, wire, sheet, tubing and casting grains. In addition SEMPSA JP is a major precious metals refiner with LBMA good delivery status, supplying Ecogold and Ecosilver to the bullion market.

METALLURGICAL EXPERTISE

SEMPSA JP have a strong metallurgical and process engineering presence across the world with many years experience in metallurgy, engineering and the processing of precious metals. This enables a full range of technical product support and development to be provided to customers when requested. Key competencies include: Alloy development, product and process development, both internally and in conjunction with customers and the Research and Development of new and novel processes that will help define the development direction for future precious metals markets.

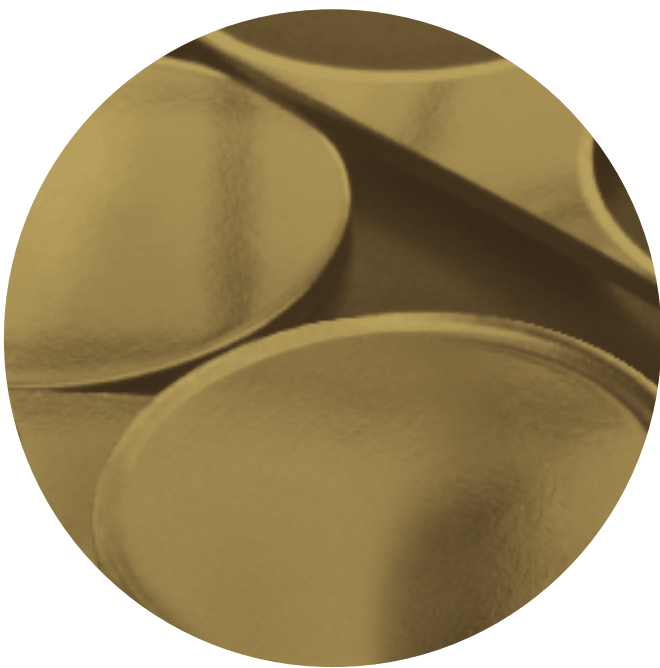

International Standards Organisation certification for
ISO9001 - Quality
ISO14001 - Environmental
BS OHSAS18001 - Health & Safety

"SEMPSA JP are an extremely reliable supplier of high quality precious metal coin blanks"

Royal Mint 2011

PRECIOUS METAL COIN BLANKS

SEMPSA JP international reputation for quality precious metal blanks production is unsurpassed due to our peerless expertise in casting, blanking, rolling, and our thorough quality control procedures.

Supplied to major mints throughout the world our precious metal coin blanks can be made in a variety of metals and alloys including:

- **Gold 99.99%, 99.90%, 91.67%, 90.00%**
- **Silver 99.9%, 95.80%, 92.50%**
- **Platinum & Palladium 99.95%, 99.50%**

Our production is not limited to these, we are also able to supply the blanks in many different gold, silver, platinum and palladium alloys.

The blanks are manufactured to customer specifications with large scale capacity available. We are able to produce blanks in many different shapes and sizes either rimmed or unrimmed.

Should your blank requirement not be a standard size, tooling can be produced as required. All blanks are accompanied by a quality control certificate (histogram) detailing weight control, diameter control and surface quality.

“State-of-the-art refining available from our facility in Madrid”

REFINING & BULLION

- State-of-the-art refining service available from our facility in Madrid.
- Good Delivery status from the LBMA London Bullion Market Association for the supply of gold and silver ingots.

The precious metals industry is increasingly discussing the subject generally termed “green” or “Eco” gold or silver. Various groups are raising significant concerns related to social and environmental issues in the supply chain of precious metals. The Numismatic industry needs to be part of the solution.

SEMPSA JP have made a significant investment in a dedicated refining line to recycle above the ground stocks of gold and silver. Worn consumer jewellery and giftware will be recycled back into fine gold and silver. The recycling process will be audited to provide a guarantee that only worn consumer jewellery or giftware is recycled into SEMPSA JP “Ecogold” and Ecosilver”.
